MRAD 360 – Clinical Integration 2

Quality Control Review

As a Registered Medical Radiation Technologist, you will be certified to work anywhere in Canada.

Quality Control programs at smaller worksites are generally managed by MRTs. Because of this, it is a necessary requirement of the CAMRT competency profile that you have a basic understanding of the normal operating parameters of digital radiographic equipment, as well as a theoretical knowledge of how to perform and evaluate the standard quality control tests.

Learning Outcome

Explain key concepts and tests needed for quality assurance programs.

Tasks and Activities

1. Complete the MRAD 360 - Quality Control Self-Test. The link for the self-test can be accessed under the Quiz tab in D2L.

Resources:

- Remember to review your course notes and textbooks.
- Review the appropriate links on the resource page found under the Resources on the side menu.

When you feel you are ready, you may attempt one of the three comprehensive quizzes (refer to the course schedule to see when each quiz is available). Each comprehensive quiz is worth 10%.
