Accessing Content from Links

In some of the files within your courses, links may appear not to work when you try to click on them.

Reason:

- For Word and PowerPoint documents, the viewer is displaying an image of the file rather than the actual file itself, so the link does not function.
- For PDF files, the configuration on your browser may be preventing you from linking.

Solution:

If a link in a document you are viewing in does not work, **download** the file and **click** on the link from the downloaded file.

Recommended Practice:

We recommend that you download all your files to avoid any problem with links. By downloading, you also have the added benefit of having your files available to you when you are offline.
